

Manual Testing Plan for Final Week 4

This document is the manual testing plan for the week 4 of the project for CS 242. This week was focused on giving the user functionality to edit/delete his of her profile. Search other users and see what they have as their music library and lastly provide login and logout functionality to the user.

Upload all the given and required files on a server and start a MySQL server database and then launch login.php in the browser.

- Verify that the login page loads with animation and you have the above given layout for the page.

Go to the New user button and sign up for a new account using valid values. This functionality was unit and manual tested in week 3 as well.

- Verify that the login was successful and you get an alert that it was.

A screenshot of a web browser displaying the 'MusicMate.com' homepage. The title bar shows 'localhost:8888/source/home.php'. The page content includes:

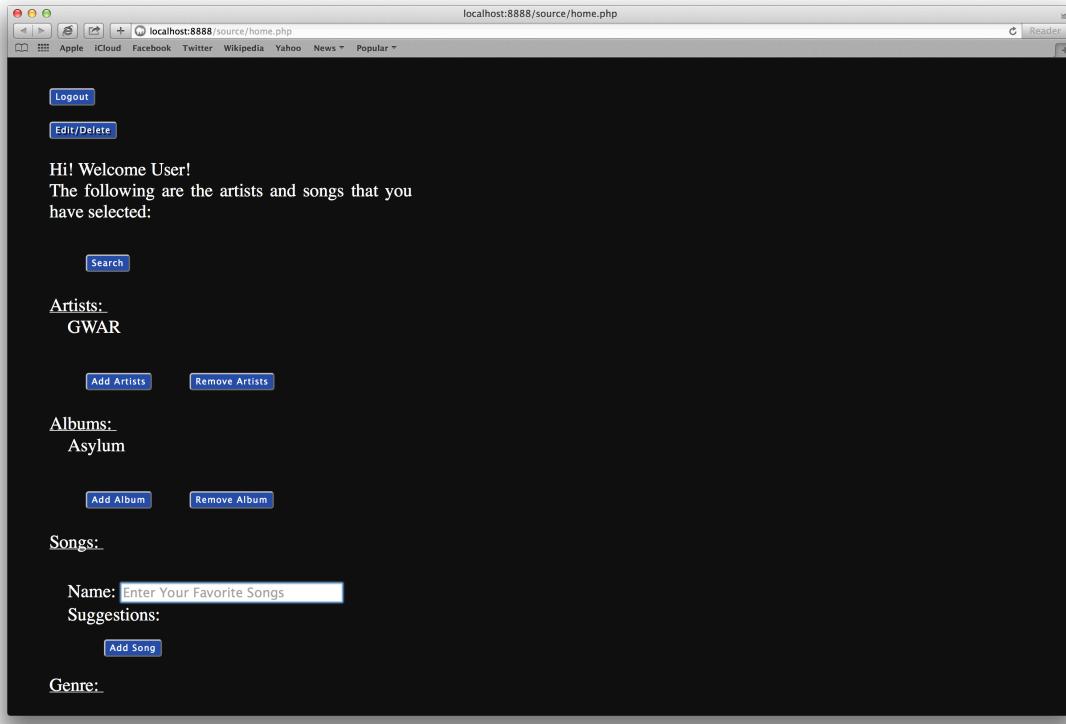

- A 'Logout' button.
- An 'Edit/Delete' button.
- A greeting: 'Hi! Welcome User!'. Below it, text says 'The following are the artists and songs that you have selected:'.
- A 'Search' button.
- A section titled 'Artists:' with 'Add Artists' and 'Remove Artists' buttons.
- A section titled 'Albums:' with 'Add Album' and 'Remove Album' buttons.
- A section titled 'Songs:' with 'Add Songs' and 'Remove Songs' buttons.
- A section titled 'Genre:'.

The background is black, and the buttons are blue.

Go to your login page.

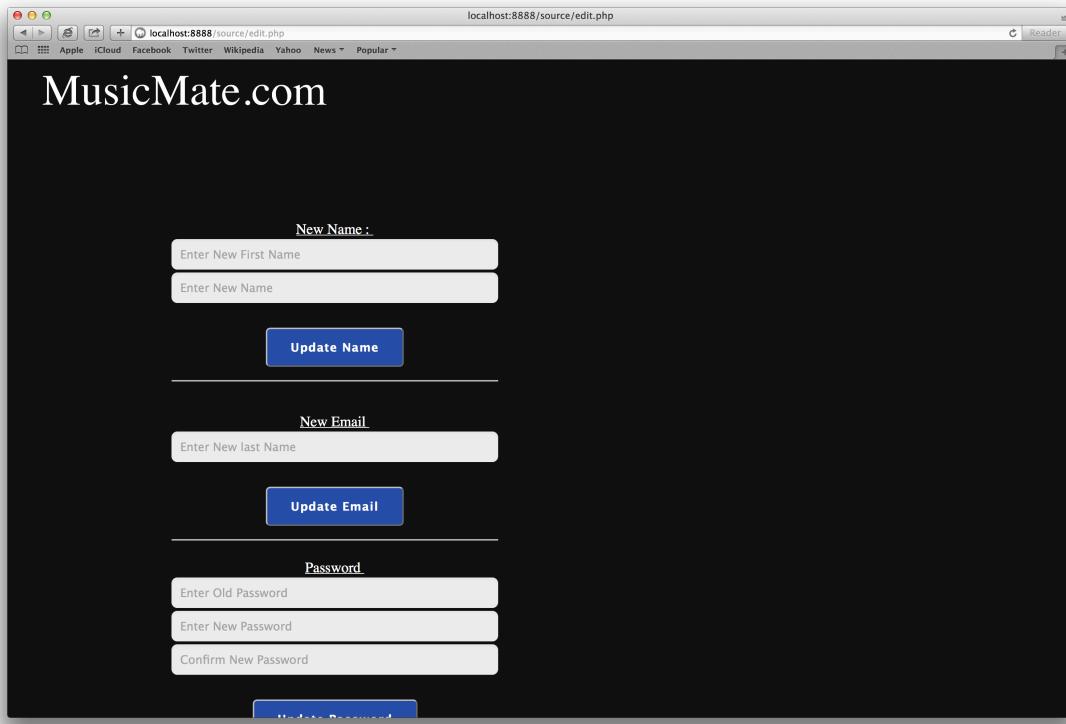

- Verify that you get your home page.

- Verify that you have an empty list for Artists, Albums and so on. Also verify three new buttons/links.
- Verify that you see logout/edit/delete and Search buttons added in the page.

Add new values around in the different categories.

- Verify that the adding and deletion works as appropriate.
- Verify that you get suggestions for addition and removal as well.

Click the edit/delete button.

- Verify that you get a page which allows you to edit the various profile options.

Delete Account

use the various options and see how they get changed and what messages you get.

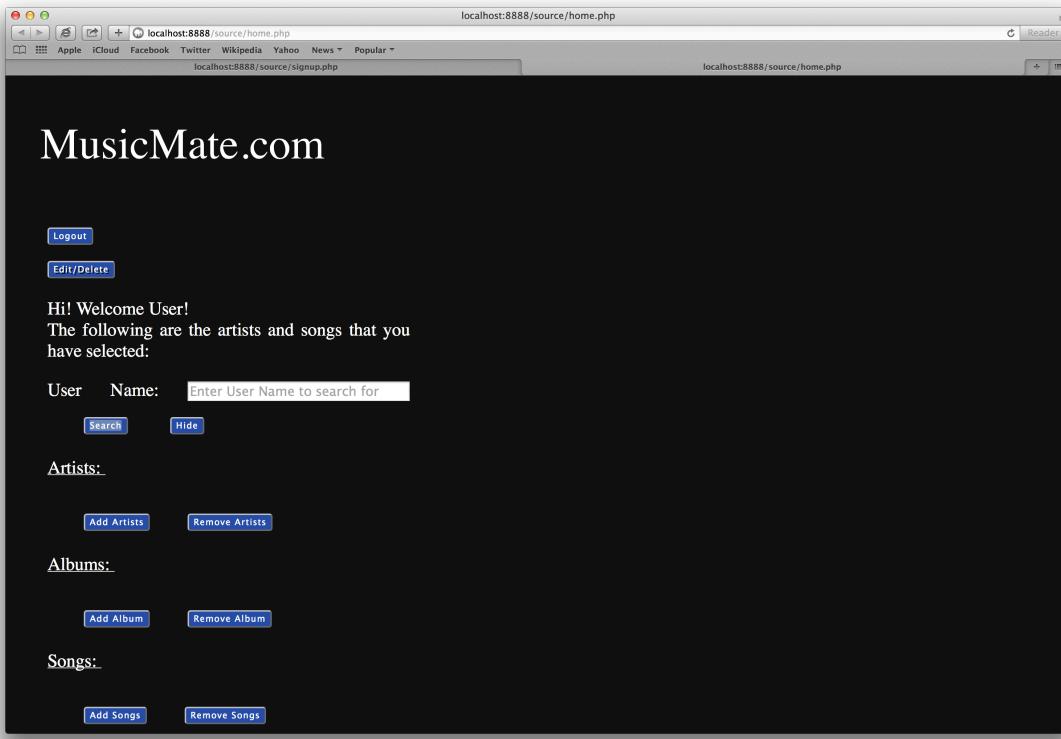

Go back to the home page and logout.

- Verify that you get an alert about that you have been logged out.

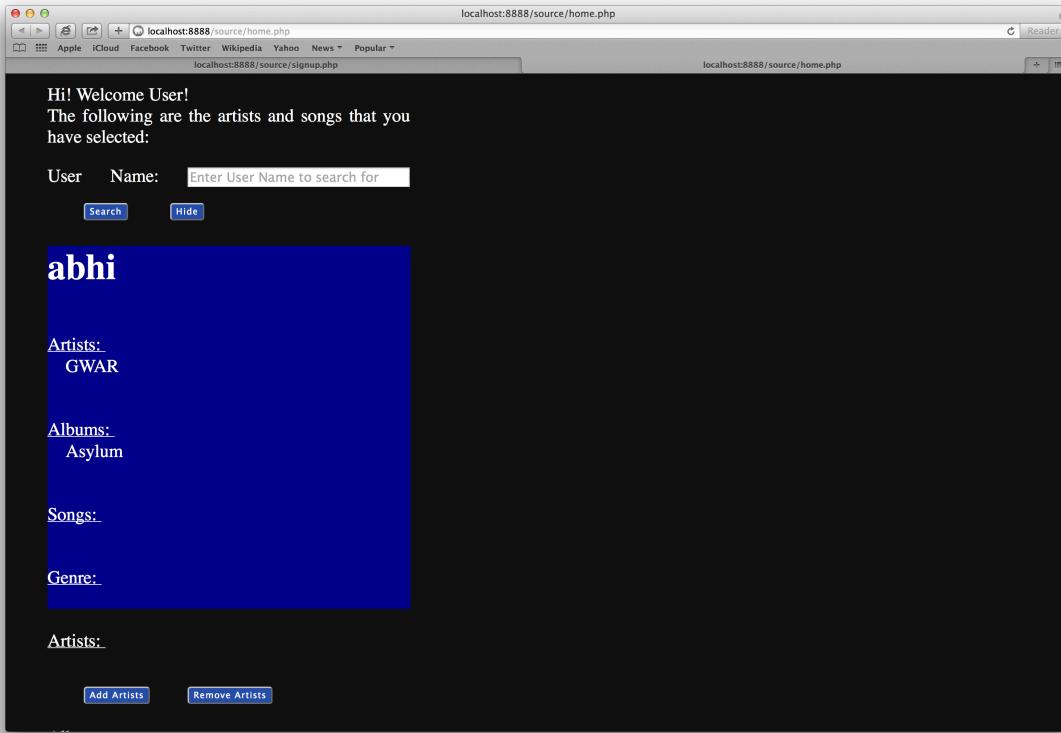

Login again with a different user id and search for a very bizarre and random user name.

- Verify that the Not Found message shows up in blue.
- Verify that the div hides and shows as the given buttons are used.

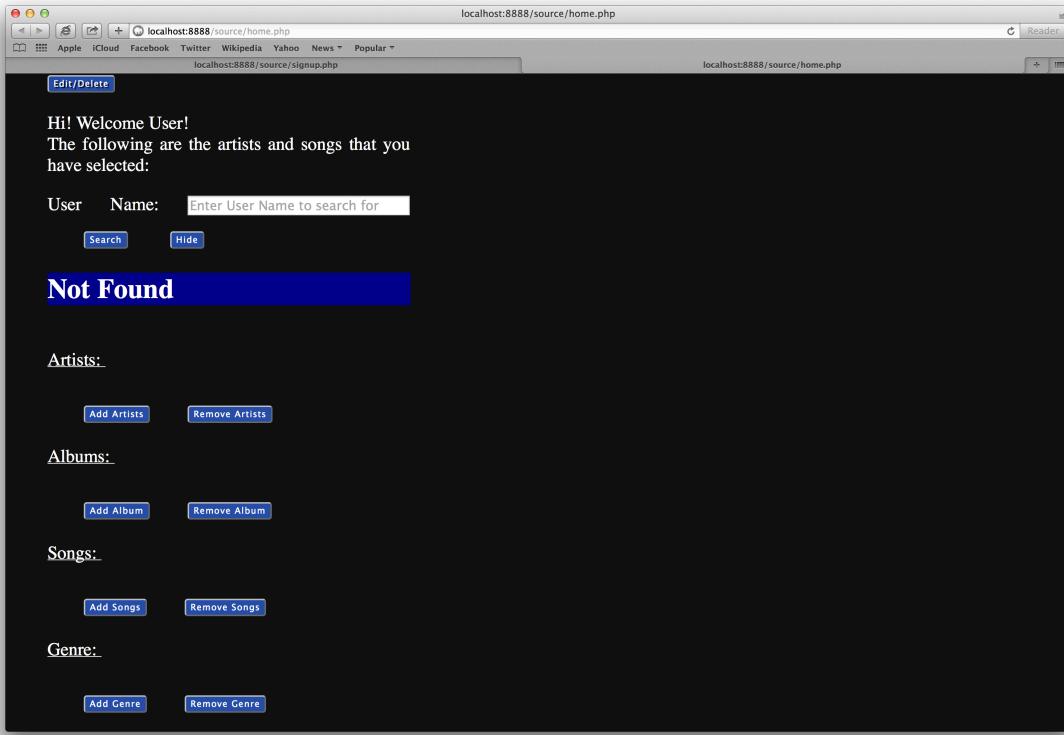

- Verify that the hide button works and hides the result.

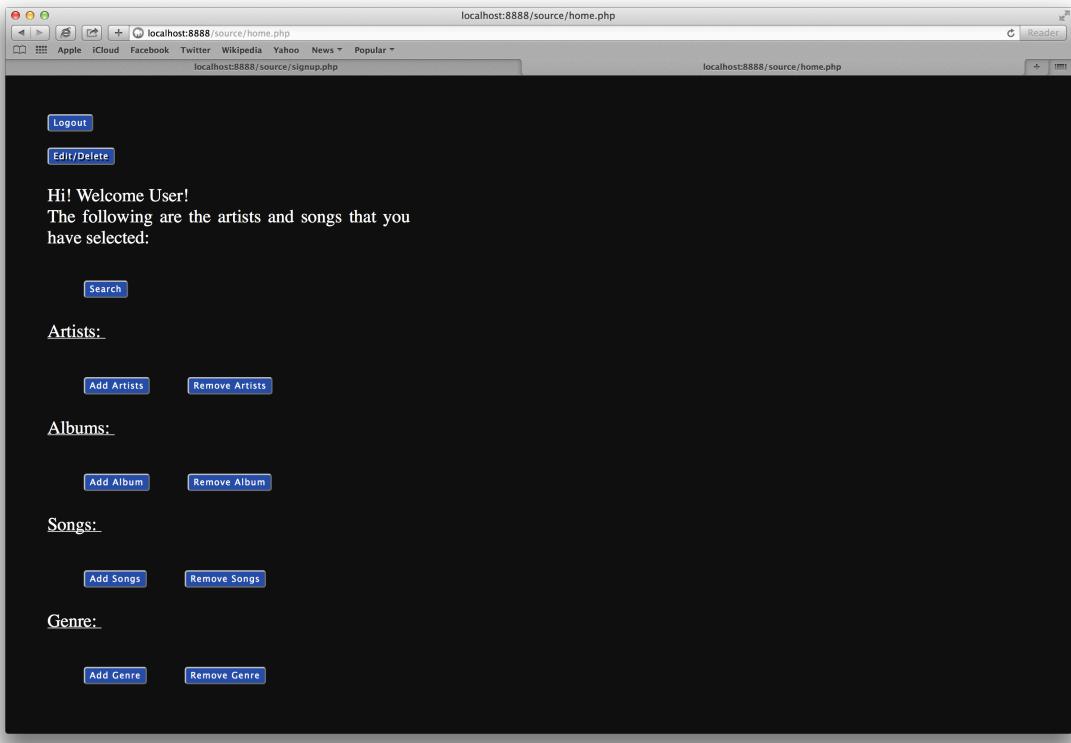

Now search for the user which you created earlier and now you can

- Verify that you can see the things you added as that user.

Now logout and delete the profile of that user.

- Verify that searching for that user gives a not found error now.

Now delete your own profile as well.

- Verify that you end up at the home page with no values added.
